

Prompt 2:

WEDDING EXPERIENCE Visitor Opens Link | ▼ Assets preload (under 2 sec) | ▼ Soft ambient music begins (optional) | ▼ Animated envelope appears at center screen | Tap / Swipe to open invitation | ▼ Envelope opens → Invitation slides upward | ▼ Hero Scene (Bride ♥ Groom + Wedding Date) | Gentle scroll begins naturally |

This is the proposed experience blueprint. Treat this as the source of truth. Review it critically. Suggest improvements. Remove unnecessary complexity. Improve storytelling. Improve mobile experience. Improve performance. Improve modularity. Do not write code. Return a refined blueprint.

Prompt 3:

Layered Architecture

Instead of thinking in terms of pages, think in terms of layers.

Now design the complete software architecture.

I want a production-quality folder structure.

- Separate
- Presentation
- Scenes
- Animations
- Theme Engine
- Content Engine
- Utilities
- Configuration
- Assets
- Future plugins

The architecture should be scalable.
No implementation code yet.

prompt 3:

Scene Map

This is what I imagine.

SCENE FLOW

| 07. Timeline |

| Ceremony |

| Reception |

| 08. Venue |

| Church |

| Map |

| 09. Gallery |

| Beautiful memories |

| 10. RSVP |

| Interactive confirmation |

11. Blessing	
Thank You	

Now become a Senior UX Designer.

Design every scene.

For each scene provide

Purpose

Emotion

Layout

Animation

Interaction

Transition

Estimated duration

Performance considerations

Accessibility considerations

Do not write code.

Only describe the experience.

prompt 5:

Design the complete visual language.

Include

Color palette

Typography

Spacing

Cards

Buttons

Forms

Countdown

Gallery

Icons

Glass effects

Lighting

Shadows

Borders

Christian visual identity

Mood board references

Do not generate code

prompt 6:

Become a Motion Designer.

Design a complete animation system.

For every scene describe

Entrance animation

Exit animation

Scroll behaviour

Timing

Easing

Duration

Parallax

Depth

Micro interactions

Rules

The entire experience should feel consistent.

Avoid gimmicks.

Performance first.

No code.

Prompt 7:

Now build the project.

Generate the Next.js project.

Generate one scene at a time.

Start with the Hero and Envelope.

Use the architecture we designed.

Do not skip details.

Do not simplify the architecture.

Wait after each scene for review.

prompt 8:

Review the entire project.

Look for

Performance issues

Accessibility issues

Code duplication

Memory leaks

Animation improvements

Bundle optimization

Image optimization

Refactoring opportunities

Suggest improvements.

Only after review, generate the optimized version.
